```

Exp. Name: Write a C program to Convert an Infix expression into Postfix

```
else if(*e == ')') {
          while(!isEmpty() && (x = pop()) != '(')
           p[k++]=x;
            }
             else if (*e == '+' || *e == '-' || *e == '*' || *e == '/' || *e == '%')
{
                while(priority(stack[top]) >= priority(*e))
                 p[k++]=pop();
                  push(*e);
                   }
                    else {
                      printf("Invalid symbols in infix expression. Only alphanumeric
and \{ '+', '-', '*', '%', '/' \} are allowed.\n");
                       exit(0);
                        }
                         e++;
                          }
                           while(top != -1) {
                               x=pop();
                                 if(x == '(') {
                                   printf("Invalid infix expression : unbalanced paren
thesis.\n");
                                   exit(0);
                                      p[k++] = x;
                                       p[k++]='\0';
                                         printf("Postfix expression : %s\n",p);
                                         int main() {
                                           char exp[20];
                                           char *e, x;
                                           printf("Enter the expression : ");
                                           scanf("%s",exp);
                                           e = exp;
                                           convertInfix(e);
```

## Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter the expression : A+B*(C-D)
Postfix expression : ABCD-*+
```

```
Test Case - 2
User Output
Enter the expression : A+B*C
Postfix expression : ABC*+
```
